Cevizlidere, Huzur Mah. 1128 Sk. Kardeler Apt. 4/8, Çankaya, Ankara, 06520

I hold a BS degree in CS from Bilkent University, Turkey. I worked in the defense industry for some time, looking to move into new fields. I have experience in C/C++, computer graphics, low-level programming and some parallel programming. Beside these, I am also interested in humans and what they achieve as a creative whole.

Experience

Software Engineer

Dec 2016 - Aug 2017

CS-Tech, Ankara (Turkey)

I worked on the company's GIS and visualization tools, using technologies like Qt, C++, OpenGL. The job mainly involved rendering engineering, computer graphics and occasional GUI programming.

Android Developer Intern

Aug 2014 - Oct 2014

Ming Yazlm, Ankara (Turkey)

Ming Yazlm developed a process management software for law offices and individual lawyers called SYAP. I worked on its Android port. Specifically, its "case details" GUI and notification system. Though this internship was remote to my usual work tools, server side software was deployed on Amazon Web Services so I got to see cloud computing and web services in action as well.

Embedded Software Intern

Aug 2012 - Oct 2012

Politekno Biliim, Ankara (Turkey)

Politekno builds specialized embedded hardware and software solutions for customers. During my internship here, I developed a RS232 bootloader system for Texas Instruments MSP430 microprocessors. JTAG interface we used in development was expensive for large scale field deployments so company wanted a simpler solution to deploy code to devices' ROM. Project used C and Keil compilers for respective microprocessors.

Skills & Specialization

C/C++, Low-level Programming, Computer Graphics

Education

Bilkent University

Sep 2009 - Jan 2015

BACHELORS, Computer Science

Ankara (Turkey)
